

SUMP PUMPS

As of October 15, 2009, any home or business that needs to continue operating a sump pump discharging clear water, may request a variance to discharge to the sanitary sewer. The temporary variance is from October 15th to April 15th. Requests for a written variance can be made by calling the Wastewater Treatment Facility at 882-6244. The seasonal variance will be issued for a specific period and must be renewed each year.

Any home or business that wishes to route the discharge of their sump pump into the sanitary sewer must apply for an individual written variance prior to discharging to the sanitary sewer. Discharges of clear water to the sanitary sewer without obtaining a written variance is not permissible.
